FOREWORD

Greetings to iris lovers everywhere! Within this, our 12th annual list, you will find many changes. Approximately 50 varieties have been added, five new and beautiful Linse hybrids, many of the best new lacy lovelies, and others. I believe our customers, both old and new, will find this a highly selective and choice listing of the finest irises in commerce. Dropped from our listing were 91 varieties which appeared in our 1957 catalog. Some were fine older varieties which no longer moved well for us—others just didn't measure up to our standards. Obviously, no one can carry all of the varieties now in commerce, and we are attempting in our own little way, to bring you only the best, at prices you can afford to pay.

Somewhere, I read recently, small business, in order to succeed, must produce a better product and give better service. Our objective exactly! Better product, better service, and better prices. (See Extras and Bonuses.) Since I cannot bring you the beauty of a color catalog, I am happy to bring you the savings so afforded.

Our garden is always open to visitors. Peak bloom is usually about May 15. You're as welcome as the flowers in May!

Sincerely, Jack Linse

THE LINSE ARILBREDS

1958 INTRODUCTIONS

GOLDEN JOPPA (Linse '58) 35". Midseason. Seedling JP-3. A hybridizer's dream! Huge, globular 8" flowers with the form of Gatesii and the color of Pinnacle! The standards, domed and firm, are creamy white, and the fine, broad falls are a medium straw yellow. Just a hint of elusive green in the middle of the heavy substance, glistening falls. This is a good grower, very fertile, and highly fragrant. Breeding, [(Extravaganza x Rajah Brooke) x Sibl] X Joppa Parrot.

*Each, Net \$25.00

TROPHY (Linse '58) 36". Midseason. Seedling Nscap 55-22. Folks tramped the ground so hard around this iris during the '57 blooming season that I was unable to get the cultivator into it for the rest of the year. A truly magnificent flower! The great, spreading 9" blossoms, with falls 4" wide and over, are of heaviest substance and beautiful form. Color is a near self of Lobelia blue, with great frilly style arms, and beard of bright, deep blue. Somewhat fertile, and a tremendous increaser. Breeding is New Snow X Capitola. I'm sure that many others would charge \$50.00 each for the above two creations. Don't miss getting these!

*Each, Net \$25.00

FRONT ROW (Linse '58) 26". Midseason. Seedling Spellcap 05. Here is a sister to the fabulous Ozie Waters. The color is also in the red range, being a Mauve rose self, with distinct and fine ruby signal patch, and brown gold beard ending in a slight crest. Slight brown gold influence at the edge of haft. Not very tall, but a fine large flower with 8" spread and falls 3 $\frac{3}{4}$ " wide. Particularly notable because it is very fertile. Clean foliage, moderate grower. Not too much stock. Breeding, Spellbound X Capitola.

*Each, Net \$20.00

BLUE MOTIFE (Linse '58) 38". Midseason. Seedling NSCAP 21-P. This is a fit companion for its sister, Trophy, much lighter (Wisteria Blue) with somewhat deeper markings, and blue based, blue tipped beard. Seems to have some green in its makeup. An extremely thrifty grower with fine large flowers and tall, sturdy stalks that will not blow over. Substance is excellent, and it has lots of pollen but its value as a breeder is not established.

*Each, Net, \$15.00

VIO (Linse '58) 36". Midseason. Seedling NSCAP 55-05. Another whopper and a different color than any we have introduced so far. A Bishop's Violet self of excellent substance and form. Flowers have an 8 $\frac{1}{4}$ " spread and the wide falls measure 3 $\frac{3}{4}$ ". Huge curly style arms and blue tipped beard. Fine garden subject. Breeding New Snow X Capitola.

*Each, Net \$10.00

HARDINESS:—These have all been tested to 20° below zero.

BUY DIRECT:—We grow our own stock and stand behind each sale.

I'M IN THE DOGHOUSE!

That's right—our deal was too good last year, but you seemed to like it, business was fine, and I'm giving you more of the same this year. I have had to guess at most prices this year because the Master Price List (with all Linse varieties deleted) was withheld from me. I do not intend being undersold, so, if any of my prices are higher than those quoted by the large Oregon color catalogs —on items at \$1.50 and up—just use their price, send your order to us, and save some money. Order with confidence, I'll protect you on price! Reference, Yakima Valley Branch, National Bank of Washington.

WINTER LOSSES

Most winter losses are probably caused by Botrytis, a fungus likely present in most soils. Under certain weather conditions this can be very destructive, but there are a number of good fungicides which can—and should—be used as preventatives. I am having good results with the new Captain, using it spring and fall. Probably the easiest and best method of application is with a sprinkling can, first cleaning away dead leaves and debris, then drenching the plants and surrounding soil with the mixture, eight tablespoons to three gallons of water, better check on the container to be sure! Cutworms, wireworms, ants and the like yield quickly to a good dusting with Aldrin. Do plant your irises in the sun, where no water stands, spray properly, and treat yourself to beautiful flowers! All that we offer have been tested for hardiness—disease prevention is easy, and up to you!
